

## Product Design

Date

Our holistic approach to design naturally includes all elements of a building from the very big scale down to the small elements and we do pay the same attention to those. It is our interest to find the best solution whether yet existing or not.

Our product design team has designed light fittings, door handles, switches, but also signage systems and furniture. When developing the elements we follow the same principles that apply to our architecture – sustainable, best function, timeless. We have broad experience in working with well known firms like, Erco, FSB, Gira, Siemens, Siteco, Zumtobel to name a few.
